

# Overview of services within the ACER School Improvement Project

## Background

ACER has established a School Improvement Project within the ACER Institute incorporating the application of the National School Improvement Tool (NSIT) within a suite of broader services for schools and systems pursuing sustainable school improvement.

These services will be offered under three Strands:

- a) Professional Learning
- b) NSIT Review Services
- c) Capacity Building for School Improvement.

It is understood that schools and systems will each have unique contextual needs and existing supports in place for school improvement. Consequently these strands will not be offered as discrete packages but will represent a range of options from which schools and systems may design to their unique contexts.

The following schema describes these options and also serves to provide a focus for the necessary preparations and potential alignments with additional services offered by the Institute and ACER's other services to schools and systems.
